Welcome to text-based instructions from Bricks for the Blind. Before you start building, here are some terms we'll be using:

- In Front of/Front: towards you.
- Behind/Back: away from you.
- Up: towards the ceiling.

- Down: towards the floor.
- Stud: the bump on a LEGO brick. Example: A 2x1 brick has two studs on it.
- Vertically: with the longest side going from front to back
- Horizontally: with the longest side going from left to right.
- Upright: pointing up towards the ceiling.
- Standing upright: The piece is perpendicular to the ground, like a wall.
- Lying flat: The piece is parallel to the ground, like a piece of toast which fell off the table.
- That one/ppp: previously placed piece.
- Plate: piece with studs.
- Tile: smooth piece without studs (unless otherwise specified)
- A jumper plate is a 1x2 plate with a single stud on top, or a 1x3 plate with only two studs on top.
- "Anti-stud" is a term for the portion of a LEGO piece which accepts studs, like the bottom of a plate or brick.
- Symmetrically: a mirror image. Example: If you place a 2x1 brick with technic connector on the front wall at the right, connector to the front, and then place another such piece symmetrically on the back wall, at the right, the technic connector of the second piece should point to the back, since it will be placed symmetrically.
- Centered-vertically: even amount of space in front of and behind piece
- Centered-horizontally: even amount of space left and right of piece.
- Row: studs lined up horizontally (left to right/side to side).
- Column: studs lined up upright or vertically (top to bottom/back to front).

For builders with low vision, or a sighted building partner may want to follow along with the printed visual instructions that come with each kit, or PDF versions are always online at LEGO.com for each set: (<https://www.lego.com/en-us/service/buildinginstructions/43205>) As low vision users may benefit from viewing the instructions on a personal device where they can zoom in on content and use assistive technologies to enhance the visuals.

Sorting the pieces:

To begin a successful build, it helps to sort the pieces into groups, bags, or small containers. Have a friend or family member do this in advance following the instructions below. You will see that the pieces should be sorted according to the building steps in the kit. Doing this in advance makes locating the pieces for each step easier. See below on how to sort the pieces to correspond to the steps in this set. Number the containers using letters A-Z, numbers, or meaningful names. The parts will be sorted into one or a small number of steps in the instructions. Example: Steps 1-3 means collect all the parts used in steps 1,2 and 3, and put them in one container.

This LEGO set comes with 6 bags labeled 1 to 6, 6 sets of instructions, and some loose pieces. Sort the pieces into groups or piles as described below. Note that where there are multiple colors of the same brick in a step, the colors will be split into 2 groups to make telling the difference easier for the builder! LEGO includes a few spare parts in case you lose something. Set these into their own group away from the rest, in case you need them later.

Congratulations, you have finished the build, now let's put all the parts together to make the castle!

1. Place the part you made using bag 2 in front of you so the open back faces the front. This part has a cake!

2. Now place the part you just made on top so it is centered and the open back faces the front.

3. Place the part you made using bag 1 to the left of your build so the open back faces the front. This part has a treasure chest! Now attach the right-facing clips to the gap of the 1x2 rounded bricks of the main build and vice versa!

4. Place the part you made using bag 3 to the right of your build so the open back faces the front. This part has a kitchen on the first floor and a glass dome with a cupcake inside! Now attach the right-facing clips to the gap of the 1x2 rounded bricks of the main build and vice versa!

5. Horizontally place the part you made using bag 4 to the left of your build so the open back faces the front. This part has a tree! Attach the right-facing bars of your part to the left-facing clips of the build.

6. Horizontally place the part you made using bag 5 to the right of your build so the open back faces the front. This part has a heart-shaped key and a birdhouse! Attach the left-facing bars of your part to the right-facing clips of the build.

7. Now you can rotate the left and right sides towards the front to close the first floor! Then you can insert the heart-shaped key into the front-facing axle connector to lock it so it doesn't open! Make sure to put the key back after!
