40764 Easter Bunny Surprise

Adapted by Jordi Isus, and tested by Jolene Nemeth.

Celebrate Easter with kids aged 7 and up, families and this LEGO® Easter Bunny Surprise (40764) portable home decor playset. The animal toy features a box with a removable lid that has movable ears and a flower crown. The box opens to reveal a small play scene with rabbit and squirrel figures on a spinning base, plus springtime and Easter items including eggs, flowers, a tree, and a carrot. The set also includes stickers to customize the portable playset and bring your rabbit to life!

Fun spring home decor display – Treat kids aged 7 and up with this imaginative Easter Bunny Surprise animal toy that creates a fun display piece for any room and boosts creative role play.

Animal toy box with a surprise inside – The set includes buildable Easter Bunny box that opens to reveal a small scene with rabbit and squirrel figures and spring decorations inside

Home decorating for spring – The box has a removable lid with movable brick-built ears and a flower crown, plus stickers to customize the bunny's face and body.

Cute decor details – LEGO® Spring home accessories, including Easter eggs, a tree, flowers, a carrot, and a spinning base for the squirrel, help spark storytelling and role play and enhance the display.

A gift for kids and adults – This fun spring display model makes a charming gift for kids and animal-lovers with a model to build and a home decor piece to enjoy all year around.

Dimensions – A 217-piece building kit with an opening Easter Bunny model measuring over 4.5 in. (12 cm) high, 2.5 in. (7 cm) wide and 4 in. (11 cm) Deep.

The front of the box shows a white LEGO bunny sitting on a soft spring-green background, surrounded by small pastel-colored flowers! The bunny has long upright ears, shiny black eyes, and a gentle, friendly expression. On its head it wears a flower crown. In the upper-left corner, the LEGO logo appears above the recommended age of 7+, the set number 40764, the title Easter Bunny Surprise, and the piece count of 217!

The back of the box shows the completed bunny from behind showing that the bunny is a box, and next to it there is an image of the bunny opened, revealing two small surprise gardens inside! The garden on the left contains a tiny white bunny, an Easter egg, and several colorful tulips! The garden on the right includes an orange tiny squirrel, a flowering tree, another Easter egg, and more tulips! There is also a top-down view showing the lid with the bunny's ears, decorated on the front with sunflowers in different colors. The pastel-green background is smooth and uncluttered, helping the bunny and the decorative elements stand out clearly!

This set has 217 pieces in total and is for ages 7+!

Bag 1: contains the pieces for the bunny's base.

Bag 2: contains the pieces to build the bunny.

Bag 3: contains the pieces to build the 2 gardens inside the bunny's box.

Bag 4: contains the pieces to build the bunny.

Welcome to Text-Based Building Instructions from Bricks for the Blind. Here is some helpful information on how to best use screen readers and browsers: bricksfortheblind.org/help-with-screen-readers. Before you start building, here are some terms we will be using:

- In Front of/Front: towards you.
- Behind/Back: away from you.
- Up: towards the ceiling.
- Down: towards the floor.
- Stud: the bump on a LEGO brick. Example: A 2x1 brick has two studs on it.
- Vertically: with the longest side going from front to back
- Horizontally: with the longest side going from left to right.
- Upright: pointing up towards the ceiling.
- Standing upright: The piece is perpendicular to the ground, like a wall.
- Lying flat: The piece is parallel to the ground, like a piece of toast which fell off the table.
- That one/ppp: previously placed piece.
- Plate: piece with studs.
- Tile: smooth piece without studs (unless otherwise specified)
- A jumper plate is a 1x2 plate with a single stud on top, or a 1x3 plate with only two studs on top.
- “Anti-stud” is a term for the portion of a LEGO piece which accepts studs, like the bottom of a plate or brick.
- Symmetrically: a mirror image. Example: If you place a 2x1 brick with technic connector on the front wall at the right, connector to the front, and then place another such piece symmetrically on the back wall, at the right, the technic connector of the second piece should point to the back, since it will be placed symmetrically.
- Centered-vertically: even amount of space in front of and behind piece
- Centered-horizontally: even amount of space left and right of piece.
- Row: studs lined up horizontally (left to right/side to side).
- Column: studs lined up upright or vertically (top to bottom/back to front).

For builders with low vision, or a sighted building partner who may want to follow along with the printed visual instructions that come with each kit, PDF versions are always online at LEGO.com: (https://www.lego.com/en-us/service/building-instructions/40764) As low vision users may benefit from viewing the instructions on a personal device where they can zoom in on content and use assistive technologies to enhance the visuals.

Sorting the pieces:

To begin a successful build, it helps to sort the pieces into groups, bags, or small containers. Have a sighted friend or family member do this in advance following the instructions below. You will see that the pieces should be sorted into groups according to the building steps in the set. Doing this in advance makes locating the pieces easier. See below on how to sort the pieces to correspond to the steps in this set. Number the containers using letters A-Z, Numbers, or meaningful names. The parts will be collected into a small Number from steps in the

instructions. Example: Steps 1-3 means collecting all the parts used in steps 1, 2 and 3, and putting them in one container.

This set includes four plastic bags labeled 1–4, several loose pieces, a sticker sheet, and one instruction booklet. Although the set contains a sticker sheet, the stickers are not required for the build and do not appear in the building steps; the booklet makes it clear that using them is completely optional. The booklet only shows the sticker sheet itself, without indicating any specific placement on the model, so you are free to put the stickers wherever you prefer. If you want to decorate the bunny box, you can place the stickers on any of the four outer walls or distribute them however feels right to you. The sheet includes simple decorative shapes such as hearts and stars in green, yellow, blue, and pink, designed to add a playful touch to the finished model.

Sort the pieces into groups or piles as described below. Note that where there are multiple colors of the same brick in a step, the colors will be split into different groups to make telling the difference easier for the builder. LEGO includes a few spare parts in case you lose something.

guidelines:

Rows and Columns: Unless we say otherwise, rows and columns are counted across the whole build.

In some builds, especially those with irregular shapes or staggered layers, not all rows have the same number of columns. This means that counting columns across the entire build can be confusing or misleading.

To make things easier, we'll sometimes count columns from a specific row, rather than from the full build. This helps the builder focus on the exact area where the new piece will go. To reflect this change, we'll adjust our phrasing. Instead of saying: "Horizontally place a 1x2 plate on the front row on the 2nd and 3rd columns from the right." We'll say: "Horizontally place a 1x2 plate on the 2nd and 3rd columns from the right of the front row."

This makes it clear that we're only counting columns within that row—not across the whole build—since other rows may have different lengths or shapes.

In some cases, to help the builder identify where to place the LEGO pieces, we will provide landmarks in addition to row and column references. These landmarks are nearby pieces that serve as tactile guides. Example: Vertically place a green 2x4 plate on the 2nd through 5th rows from the back on the 2nd and 3rd columns from the left, so the back row sits on the front row of the back left 2x2 corner plate, and the front row sits on the back row of the front left 2x2 corner plate.

Description:

Here is a description that may help you blind builder imagine what your build is going to look like before building. The completed Easter Bunny Surprise is a small white bunny that also functions as a decorative box. It sits on a green base that feels like a grassy field, giving the whole model a soft springtime atmosphere. The bunny's body is smooth and rounded, with long upright ears, tiny black eyes, a gentle pink nose, and a small white tail. Its feet are very small and almost hidden beneath its body, so the overall shape feels compact and cuddly.

The bunny opens like a container. The lid of the box is the top part of the bunny's head, including the long ears and the flower crown. When you lift this lid, you reveal the interior scene hidden inside the bunny's body. If the bunny is facing forward, the inside is divided into two miniature gardens: one at the back and one at the front.

The back garden has a green base, like fresh grass. It contains green, orange, pink and lime-colored flowers, several colorful tulips, a bright orange egg, and a tiny white rabbit figure nestled among the plants. The front garden also has a green base with lime and green flowers. A reddish-brown tree decorated with small blossoms rises from this garden, surrounded by more colorful tulips. There is another orange egg, a small acorn, and a tiny orange squirrel sitting on a spiny base that can be rotated to face any direction.

On the left side of the bunny, when it is facing forward, there is an additional opening. This side of the box is divided into two sliding sections that can be pushed forward or backward. Opening these sections gives easier access to the two surprise gardens inside, allowing you to explore the details more closely.

The front of the bunny's lid is decorated with cheerful sunflower designs. Some have light-blue petals with yellow centers, while others are yellow with warm orange centers. The crown is also decorated with sunflowers. These flowers add a bright, festive touch to the bunny's face and complete the feeling of a joyful spring surprise.

Book 1

Bag 1

Group 1: contains the pieces for steps 1-5.1.

Group 2: contains the pieces for steps 5.2-7.

Group 3: contains the pieces for steps 8-10.

Group 4: contains the pieces for steps 11-15.1.

Group 5: contains the pieces for steps 15.2-20.

Bag 2

Group 6: contains the pieces for steps 21-28.

Group 7: contains the pieces for steps 29-39.

Bag 3

Group 8: contains the pieces for steps 40-42.1.

Group 9: contains the pieces for steps 42.2-44.1.

Group 10: contains the pieces for steps 44.2-46.1.

Group 11: contains the pieces for steps 46.2-47.1.

Group 12: contains the pieces for steps 47.2-49.1.

Group 13: contains the pieces for steps 49.2-52.

Group 14: contains the pieces for steps 53-54.1.

Group 15: contains the pieces for steps 54.2-56.1.

Group 16: contains the pieces for steps 56.2-57.

Group 17: contains the pieces for steps 58-59.

Group 18: contains the pieces for steps 60-64.

Bag 4

Group 19: contains the pieces for steps 65-76.

Group 20: contains the pieces for steps 77-84.1.

Group 21: contains the pieces for steps 84.2-85.

Let’s get to building!

Building Instructions (Bag 1, Book 1):

Group 1:

Step 1

Horizontally place a lime 2x8 plate in front of you.

Step 2

Vertically place a white 1x4 plate on the leftmost column, so it is centered vertically. Repeat symmetrically to the right.

Step 3

Horizontally place a lime 1x8 plate behind the lime 2x8 plate, so the leftmost column and the rightmost column attach underneath the 2 back overhanging ppps.

Step 4

Place a lime 4x8 half round plate horizontally underneath the front overhanging plates so it is centered horizontally and the round side faces the front.

Step 5.1

Vertically place a pink 1x2 tile on the 2 back rows on the 4th column from the left. Place another vertically on the 3rd and 4th rows from the back on the 4th column from the right.

Group 2:

Step 5.2

Vertically place a light blue 1x2 tile behind the ppp. Then place another vertically on the 3rd and 4th rows from the back on the 4th column from the left, so it sits in front of the vertical back pink 1x2 tile and to the left of the vertical front pink 1x2 tile.

Step 6

Vertically place the front row of an orange 1x2 half round tile to the left of the back row of the ppp, so the rounded edge faces the left. Place the right column of a lavender 2x2 curved corner tile behind the ppp, so the larger, outside, curve faces the front left. Place another symmetrically in front of the left column of the ppp, so the larger, outside, curve faces the back left. Repeat the 3 placements symmetrically to the right.

Step 7

Place a white 2x2 round plate with axle hole on the 2nd and 3rd rows from the front on the 2nd and 3rd columns from the right counting the entire build, so the left column sits in front of the front row of the front right 2x2 curved corner tile. Repeat symmetrically to the left.

Group 3:

Step 8

Horizontally place a white 1x2 half round tile on the front row of each 2 ppps, so the rounded edge faces the front.

Step 9

Place a green 1x1 flower plate on the 2nd row from the front on the 4th column from the right counting the entire build. Then place another on the left column of the front row (here, we are counting only the columns of this mentioned row). Skip 1 row to the back and place another on the 3rd row from the front. The 3 green 1x1 flower plates should form a triangular shape which looks like a braille letter O.

Step 10

Now we will assemble 1 white 1x4 hinge brick! Locate a 1x2 brick which has a downward pointing pin on one short end, and a 1x2 brick which has a pin hole at the bottom of one short end. Push the pin from the first piece into the hole on the second, keeping the studs of both pointed up. You can open the hinge to create a 1x4 brick, close the hinge to make a 2x2 brick, or make it some angle in between. Vertically place the 2 front rows of the 1x4 hinge brick on the back right corner, so the rounded hinge part faces the right and 2 rows overhang to the back.

Group 4:

Step 11

Let’s make a part! Let’s build the other half of the base. Horizontally place a lime 2x8 plate in front of you.

Step 12

Vertically place a white 1x4 plate on the leftmost column, so it is centered vertically. Repeat symmetrically to the right.

Step 13

Horizontally place a lime 1x8 plate behind the lime 2x8 plate, so the leftmost column and the rightmost column attach underneath the 2 back overhanging ppps.

Step 14

Horizontally place a lime 4x8 half round plate in front of the lime 2x8 plate, so the back left corner and the right back corner are placed underneath the 2 front overhanging plates.

Step 15.1

Vertically place a pink 1x2 tile on the 2 back rows on the 4th column from the left. Place another vertically on the 3rd and 4th rows from the back on the 4th column from the right.

Group 5:

Step 15.2

Vertically place a light blue 1x2 tile behind the ppp. Then place another vertically on the 3rd and 4th rows from the back on the 4th column from the left, so it sits in front of the vertical back pink 1x2 tile and to the left of the vertical front pink 1x2 tile.

Step 16

Vertically place the front row of an orange 1x2 half round tile to the left of the back row of the ppp, so the rounded edge faces the left. Place the right column of a lavender 2x2 curved corner tile behind the ppp, so the larger, outside, curve faces the back left. Place another symmetrically

in front of the left column of the ppp, so the larger, outside curve faces the front left. Repeat the 3 placements symmetrically to the right.

Step 17

Horizontally place a white 1x4 plate on the 3rd row from the front, so it is centered horizontally.

Step 18

Place a green 1x1 flower plate in front of the left column of the ppp. Repeat symmetrically to the right. Then place another on the right column of the front row, (here, we are counting only the columns of this mentioned row).

Step 19

Bring back your main build, so the rounded edge faces the back, and the straight edge is horizontally and is in the front. place the 2 overhanging rows of your main build on the back left corner of your current build. Then rotate your build 90 degrees clockwise so the rounded edges face the left and the right, and the hinge bricks should be in the back.

Step 20

Place a white 1x1 brick on the 2nd column from the left of the back row (here, we are counting only the columns of this mentioned row), so it sits to the left of the horizontal white 1x4 hinge brick. Repeat symmetrically to the right. then place a white 1x3 brick on the 2nd through 4th columns from the left of the front row (here, we are counting only the columns of this mentioned row). Repeat symmetrically to the right.

With the grassy base complete and the clever little 1×4 hinge brick in place—ready to let the bunny's secret sections slide open—you've officially built the foundation of your Easter Bunny Surprise. Time to hop into Bag 2 and keep the adventure going!

Building Instructions (Bag 2, Book 1):

Group 6:

Step 21

Let's make 2 identical stacks! Stack 2 white 1x3 bricks. You should now have 2 identical stacks! Place your first stack horizontally on the 2nd through 4th columns from the right of the back row (here, we are counting only the columns of this mentioned row). Repeat symmetrically to the left.

Step 22

Now we will assemble one white 1x4 hinge brick! Locate a 1x2 brick which has a downward pointing pin on one short end, and a 1x2 brick which has a pin hole at the bottom of one short end. Push the pin from the first piece into the hole on the second, keeping the studs of both pointed up. You can open the hinge to create a 1x4 brick, close the hinge to make a 2x2 brick, or make it some angle in between. Horizontally place your white 1x4 hinge brick on the back row, so it is centered horizontally and the rounded hinge part faces the back.

Step 23

Place a white 1x1 brick to the right of the ppp. Repeat symmetrically to the left.

Step 24

Let's make 2 identical stacks! Stack 3 white 1x3 bricks. You should now have 2 stacks. Horizontally place your first stack on the 2nd through 4th columns of the front row (here, we are counting only the columns of this mentioned row), so it sits on the horizontal front left white 1x3 brick. Repeat symmetrically to the right.

Step 25

Let’s make a part! Horizontally place a white 2x8x4 curved panel with 2x3 1/3 cutout with 4 studs on each side lying flat in front of you, so the antistuds face the front and the 2 1x4 columns of studs face up.

Step 26

Place a white 4x4 tile with 4 studs on edge on top of the ppp, so it is centered horizontally and vertically with the studs facing the front.

Step 27

Place the front row of a white 2x2 round plate on the front row of the ppp, so it is centered horizontally. Place a white 2x2 cloud tile with 2 studs on edge on the ppp, so the studs face the front.

Step 28

Flip your part so it stands horizontally upright with the studs facing up and the ppps face the front. Rotate your part 90 degrees clockwise, so the ppps face the left. Bring back your main build and place it horizontally in front of you with the hinge bricks facing the back and the rounded edges facing the left and the right. Vertically place the right column of your part to the left of the front and back walls. You’ve built the back of the bunny and its tail.

Group 7:

Step 29

Let’s make a part! Let’s start building the bunny’s face! Horizontally place a white 2x8x4 curved panel with 2x3 1/3 cutout with 4 studs on each side lying flat in front of you, so the antistuds face the front and the 2 columns of 1x4 studs face up.

Step 30

Place a white 4x4 plate on top of the ppp, so it is centered horizontally and vertically.

Step 31

Place 2 white 2x2 round tiles with eye pattern one to the right of the other on the 2 back rows of the ppp. Ask a sighted friend to help you orient both printed patterns of the eye in the right position. Place a nougat 2x2 round plate with axle hole in front of the left eye. Repeat symmetrically to the right.

Step 32

Vertically place a nougat 1x2 half round tile on the right column of the ppp, so the rounded edge faces the right. Repeat symmetrically to the left. Horizontally place the left column of a nougat 1x2 jumper plate to the right of the back row of the ppp.

Step 33

Place a nougat 1x1 quarter round tile in front of the left column of the ppp, so the right angle faces the back left and the rounded edge faces the front right. Repeat symmetrically to the right.

Step 34

Place a pink 1x1 quarter round tile on the stud of the 1x2 jumper plate, so the rounded edge faces the back, and the right angle faces the front, this is the nose.

Step 35

Flip your part so it stands horizontally upright with the studs facing up and the ppps facing the front. Rotate your part 90 degrees counterclockwise, so the ppps face the right. Bring back your

main build and place it horizontally in front of you with the hinge bricks facing the back and the rounded edges facing the left and the right. Vertically place the left column of your part to the right of the front and back walls, so the ppps face the right.

Step 36

Place a white 3x3 curved corner plate on the front right corner of the right panel following the rounded edge. Repeat symmetrically to the back. Then repeat both placements symmetrically to the left.

Step 37

Horizontally place a white 1x2 plate to the right of the front row of the front left 3x3 curved corner plate. Repeat symmetrically to the right. Then repeat both placements symmetrically to the back.

Step 38

Vertically place a white 1x2 tile on top of the right panel, so it is centered vertically. Repeat symmetrically to the left.

Step 39

Place a white 2x2 curved corner tile on top of the wall on the front left corner, so the outside, larger curve faces the front left. Repeat symmetrically to the right. Then repeat both placements symmetrically to the back. Horizontally place a white 1x3 plate to the right of the front row of the front left 2x2 curved corner tile. Repeat symmetrically to the right. Then repeat both placements symmetrically to the back.

With all four white sides standing tall, the bunny's bright face smiling with its shiny black eyes, pink nose, and fluffy white tail, you've now built the full outer body—and revealed that this adorable creature is secretly a container waiting to be filled with surprises. The top is still open, like the bunny is politely asking for a hat. Time to jump into Bag 3 and keep the magic hopping!

Building Instructions (Bag 3, Book 1):

Group 8:

Step 40

Let's make a part! Horizontally place a green 4x6 plate in front of you. Vertically place a green 1x2 jumper plate on the back right corner of the ppp.

Step 41

Vertically place a green 1x2 jumper plate in front of the ppp. Place another vertically to the left of the ppp. Place a green 1x1 flower plate behind the ppp. Place a tan 1x1x2/3 short brick behind the ppp.

Step 42.1

Place a green 1x1 flower plate on the front row on the 3rd column from the right.

Group 9:

Step 42.2

Place a lime 1x1 flower plate behind the ppp. Then place the right column of a green 2x2 tile with stud behind the ppp. Place the right column of another in front of the left column of the ppp.

Step 43

Place a lime 1x1 flower plate behind the left column of the ppp. Place a tan 2x1x2/3 short brick behind the ppp.

Step 44.1

Place a lime 1x1 flower plate on the front left corner of your part.

Group 10:

Step 44.2

Place a green 1x1 flower plate behind the ppp. Vertically place a green 1x2 jumper plate behind the ppp.

Step 45

Place a green 1x1 flower plate on the stud of the ppp. Place another on the 2nd vertical front green 1x2 jumper plate starting from the right.

Step 46.1

Place an orange easter egg on the back row of your part, so it is centered horizontally and sits on the stud of the back 2x2 tile with stud. Place a yellow tulip with bottom bar on the back left green 1x1 flower plate.

Group 11:

Step 46.2

Place a pink 1x1 tulip with bottom bar in front of the ppp. Place another on the stud of the vertical front jumper plate on the second column from the right.

Step 47.1

Place a tan 1x1x1 2/3 brick with 2 studs on 1 side on the back row on the 2nd column from the right, so the side studs face the front and sits on the back right tan sort brick. Place a purple 1x1 flower plate upright on the bottom front facing side stud of the ppp.

Group 12:

Step 47.2

Place an orange 1x1 flower plate upright on the top front facing side stud of the 1x1x1 2/3 brick with 2 front facing side studs.

Step 48

Insert the bottom end of an orange carrot into the open stud of the vertical front right 1x2 jumper plate. Insert the bottom stem of a green 1L stem with 3 short stems from top to bottom into the top facing hole of the ppp.

Step 49.1

Place a tan 1x1x1 2/3 brick with 2 studs on 1 side on the back row on the 2nd column from the left, so the side studs face the front, and it sits on the back left tan short brick. Place an orange 1x1 flower plate upright on the top front facing side stud of the ppp.

Group 13:

Step 49.2

Place a purple 1x1 flower plate upright on the bottom front facing side stud of the left 1x1x1 2/3 brick with 2 front facing side studs.

Step 50

Horizontally place a tan 1x4 arch brick on the back row, so it is centered horizontally and sits on the 2 1x1x1 2x3 bricks with front facing flowers. Horizontally place a light blue 1x2 slope tile on the 2 right columns of the ppp, so it slopes to the right. Repeat symmetrically to the left.

Step 51

Place a small white rabbit with black eyes and pink nose on the front 2x2 tile with stud, so it faces the front right.

Step 52

Bring back your main build and place it vertically in front of you, so the face of the bunny faces the front. Push the front section of the bunny forward so it points vertically to the front. Then Horizontally place your part inside the back section of the bunny.

Group 14:

Step 53

Let's make a part! Horizontally place a green 4x6 plate in front of you. Place a green 2x2 tile with stud on the back left corner of the ppp.

Step 54.1

Place a green 1x1 flower plate in front of the left column of the ppp. Place another on the back row on the 3rd column from the left.

Group 15:

Step 54.2

Place a lime 1x1 flower plate in front of the ppp. Place another on the front left corner of your part.

Step 55

Place the front row of a tan 2x2 turntable plate base to the right of the ppp. Insert the bottom bar of a light grey 2x2 inverted round tile with bottom bar into the center hole of the ppp, so it spins freely. Place a green 2x2 round tile with stud on the ppp.

Step 56.1

Place a lime 1x1 flower plate on the 2nd row from the front on the 3rd column from the right.

Group 16:

Step 56.2

Place a green 1x1 flower plate behind the ppp Then place a reddish brown 1x1 plate behind the ppp.

Step 57

Place a green 2x2 tile with stud to the right of the 2 ppps. Vertically place a green 1x2 jumper plate in front of the right column of the ppp. Place another horizontally to the left of the front row of the ppp. Place a green 1x1 flower plate behind the left column of the ppp. Place another to the right of the ppp, so it sits on the stud of the vertical front right 1x2 jumper plate.

Group 17:

Step 58

Place a lime 1x1 flower plate on the stud of the horizontal front 1x2 jumper plate.

Step 59

Place a yellow tulip with bottom bar on the ppp. Place another on the front left corner of your part so it sits on the front left lime 1x1 flower plate. Place an orange easter egg on the stud of the back left 2x2 tile with stud.

Group 18:

Step 60

Place a pink tulip with bottom bar on the front right corner, so it sits on the front right green 1x1 flower plate. Place a nougat 1x1 round tile printed with a reddish brown acorn pattern on the stud of the back right green 2x2 tile with stud.

Step 61.1

Let's make a part! Let's build a tree! Horizontally hold a reddish brown 1x3x2 half arch brick upright, so the studs face up and 2 columns overhang to the right. place a reddish brown 1x3x2 half arch brick on the leftmost column of the ppp, so 2 columns overhang to the left. Horizontally place the left column of a reddish brown 1x2 plate on the rightmost column of the ppp.

Step 61.2

Place a reddish brown 1x1 plate with 1x1 side stud hanging down on the left column of the ppp, so the side stud faces the front. Place another to the left of the ppp, so the side stud faces the front.

Step 61.3

Place a lime 1x1 round plate with 3 leaves upright on the front facing side stud of the ppp, so the leaves face the bottom left. Place another to the right of the ppp, so the leaves face the bottom right. Place a pink 1x1 flower plate on each of the 2 ppps. Bring back your sub build and position it horizontally in front of you, so the orange easter egg is at the back left. Place the bottom antistud of your part on the 3rd column from the right of the back row, so it sits to the left of the back right 2x2 tile with a 1x1 round tile printed with an acorn pattern.

Step 62

Place a dark orange squirrel with black eyes with white pupils pattern, and black nose on the stud of the green 2x2 round tile with stud you previously placed on the turntable. By spinning the squirrel base, you can decide where the squirrel faces. Rotate your sub build 90 degrees counterclockwise, so it is vertically in front of you and the easter egg is at the back right.

Step 64

Bring back your main build, and position it vertically, so the face of the bunny points to the front. Push the front section forward so it opens at a right angle. Vertically place your sub build inside the front section of the main build. Then push the section backward closing the bunny's box.

With both secret gardens now blooming inside the bunny's container—each with its grassy green base, colorful flowers, bright tulips, and cheerful orange egg—you've brought the heart of the Easter Bunny Surprise to life. One garden shelters a tiny white rabbit, while the other shows off a flowering tree, a dark-orange squirrel, and its precious little acorn tile. Your bunny is officially hiding more surprises than a magician's hat. Time to hop into Bag 4 and keep the fun rolling!

Building Instructions (Bag 4, Book 1):

Group 19:

Step 65

Let's make a part! Let's start building the lid! Horizontally place a white 2x10 plate in front of you.

Step 66

Place the front row of a white 3x3 quarter round plate on the back left corner of the ppp, so the right angle faces the front right and the rounded edge the back left, and 2 rows overhang to the back.

Step 67

Horizontally place a white 2x3 plate in front of the ppp, so 1 row overhangs to the front.

Step 68

horizontally place the back left corner of a white 2x10 plate underneath the front overhang of the ppp, so it sits in front of the horizontal back 2x10 plate from step 65.

Step 69

Vertically place a white 4x8 plate on top of your part, so it is centered horizontally and vertically. Place a white 3x3 quarter round plate to the left of the 3 front rows of the ppp, so the right angle faces the back right and the rounded edge faces the front left, and 2 rows overhang to the front. Repeat symmetrically to the right. Then repeat symmetrically to the back right.

Step 70

Place a white 2x3 plate in front of the ppp.

Step 71

Turn your part upside down. Horizontally place a pink 1x6 plate on the 2nd row of antistuds from the back, so it is centered horizontally. Repeat symmetrically to the front.

Step 72

Turn your part right side up, so it is horizontally in front of you. Vertically place a white 2x8 plate on top of your part on the 3rd and 4th columns from the left, so it is centered vertically. Place another vertically to the right of the ppp.

Step 73

Place a white 2x2 plate with 2 studs and an upright hinge finger to the right of the 2nd and 3rd rows from the back of the ppp, so the finger points vertically upright at the back. Place another symmetrically to the front. Vertically place the front row of a white 1x2 plate to the right of the back row of the ppp.

Step 74

Horizontally place the rightmost column of a white 2x6 plate on the ppp, so it is centered vertically on your part.

Step 75

Vertically place a white 1x2 half round tile with stud to the right of the ppp, so the rounded edge faces the right. Place another vertically behind the ppp, so the rounded edge faces to the right. repeat the last placement symmetrically to the front.

Step 76

Place a white 1x1 short brick with a round side and a side stud on each of the 3 ppps, so the side studs face the right. these are the points of the crown!

Group 20:

Step 77

Let’s make 2 identical ears! Horizontally place a white 1x4 curved inverted slope brick in front of you, so it slopes to the left. Horizontally place the left column of a white 1x5 plate underneath the rightmost column of the ppp.

Step 78

Horizontally place a white 1x2 plate with 2 hinge fingers on 1 short end on the 2 right columns of the ppp, so the fingers face the right. Horizontally place a white 1x2 plate t

o the left of the ppp.

Step 79

Horizontally place a pink 1x6 plate on top of your part on the 6 right columns.

Step 80

Horizontally place a pink 1x4 plate on the 4 left columns of the ppp. Place a white 1x2 plate horizontally on the ppp so it is centered horizontally to it. Then, place a white 1x2 tile horizontally on the ppp.

Step 81

Horizontally place a white 1x3 curved slope tile to the right of the ppp, so it slopes to the right. Repeat symmetrically to the left. You should now have 2 identical ears!

Step 82

Bring back your sub build, from step 76 and position it vertically in front of you, so the side studs face the front. Hold the first ear vertically upright, so the hinge fingers are at the bottom facing front and back and the antistuds of your part face the right. In this position attach it to the right upright hinge finger of your sub build. Repeat symmetrically to the left. You’ve placed the 2 ears!

Step 83

Let’s make 2 identical flowers! Place a green 1x1 round plate with 3 leaves in front of you, so the leaves face the left. Place a yellow 2x2 sunflower on the ppp. Then place an orange 1x1 round tile on the ppp. You should now have 2 identical parts! Bring back your sub build and position it vertically in front of you, so the side studs face the front. Place your first sunflower on the leftmost column of the 2nd row from the front, so the leaves face the left. Repeat symmetrically to the right.

Step 84.1

Place a yellow 2x2 sunflower upright on the middle front facing side stud of your build. Place an orange 1x1 round tile upright on the ppp.

Group 21:

Step 84.2

Place a light blue 2x2 sunflower upright on the front left facing side stud. Then place a yellow 1x1 round tile on the ppp. Repeat both placements symmetrically to the right. Now your 3 points of the crown have flowers.

Step 85

Bring back your main build and position it vertically in front of you, so the bunny’s face is at the front. Vertically place your sub build on top of your main build, so the ppps are at the front. Your

build is complete! With the lid now complete—its long white ears standing proudly upright and its cheerful flower crown blooming across the front—you've given the Easter Bunny Surprise its final touch of springtime charm. The crown mixes light-blue sunflowers with yellow centers and bright yellow sunflowers with warm orange centers, creating a tiny festival of colors right above the bunny's face. Placing the lid on top of the bunny closes the container and gently hides the two secret gardens inside, keeping all the surprises tucked safely beneath those tall ears.

At this point, you've built a wonderfully cute white bunny with a friendly face, shiny black eyes with white pupils, a soft pink nose, and a fluffy tail at the back. Inside, you've created two miniature gardens filled with flowers, tulips, eggs, a tiny rabbit, a flowering tree, a squirrel, and even a little acorn. You've assembled the sliding side sections, the grassy base, the container walls, and now the decorated lid that brings everything together.

You've built an Easter Bunny full of secrets, color, and personality—an adorable springtime companion that hides a whole world inside. What part of the build did you enjoy the most? Happy easter!

Congratulations on finishing your build! Would you like to inspire other blind people to build LEGO sets? Let's feature your build on our Builders page. It's easy and we will do all the work! Just contact us at info@bricksfortheblind.org and together we will make it happen!

We hope you enjoyed building your LEGO set! Bricks for the Blind is able to create these text-based building instructions thanks to generous donations from our builders. If you enjoy the instructions we create, please consider making a $5 donation at https://www.gofundme.com/f/bricks-for-the-blind-gofundme. Bricks for the Blind is a registered tax exempt 501(c)(3) corporation.

Please sign up for our newsletter and follow us on Facebook and Instagram to be the first to know when new instructions are available!

There are no adds at the end of this set.
